A Court of Later

FALL 1934 SPRING 1935

Our Half-Century of Experience of Untold Value in Improving Stocks

THE unusual cold winter of 1932-33 and the extreme drouth of 1934 gave nursery stock the most extreme test in our fifty years of experience. This has been of untold value in proving what stock can stand such extreme conditions. Any plant that survived such an

ordeal can be depended on.

The stock we have now may be considered iron clad varieties or specimens, and can be planted with every assurance that they will do well, and not suffer from any weather conditions in the future. Of course, this applies to plants that have been grown dry, and are not to be compared with plants grown by irrigation, which are often soft and sappy.

We are proud to announce that the stock offered in the following list is about as handsome and vigorous as any we have ever grown.

We urge our customers whenever possible to come to the nursery and make their own selection. It is a well known fact that certain nurserymen on certain soils do grow better stock than others and for this reason we are anxious for our customers to see our stock and judge for themselves.

Not only is Fort Worth a favorable place in which to grow stock, but it is located in the center of a vast territory that can be reached

easily and quickly. Shipment by freight or truck can be made overnight to most points between Fort Worth and Houston or San Antonio on the south; Shreveport on the east, most of Oklahoma points on the north; and Amarillo, Midland and San Angelo on the west. We have plenty of large trucks and can make quick delivery. This is usually the best way to handle stock to points within 400 miles of Fort Worth.

Desirable Sizes. While we, in common with nearly all nurserymen, have lots of overgrown stock, we also have plenty of the smaller and medium grades which are quite scarce this season, for the reason that many nurserymen did very little planting of young stock dur-ing the last four years. We kept up our planting during this period, and now have plenty of fresh, young vigorous plants, which are vastly superior to much of the old, starved and overgrown plants that

may be found in some places.

Landscape Service. We are prepared to furnish plans and supervision on landscape service where

desired.

J.B. Baken

President, BAKER BROS. Nursery

Wholesale Price List

BAKER BROS., Nursery

FORT WORTH, TEXAS

TERMS:-

5% discount cash with order—2% 10 days—1% 30 days—60 days net. Packing extra at cost. Packing free in carlots and 10% off list price on evergreens. Truck loads delivered within a radius of 300 miles at cost. This is a very satisfactory method of handling stock.

Prices Subject to Change Without Notice

THE PICTURE ON THE FRONT COVER

A view of one of our fields showing a block of our Specimen Red Cedar. We have hundreds of these from 12 to 18 feet that can be moved successfully.

DIOMARIA			

BIOTA, Excelsa:

Valuable for its compact form, as well as being hardier than the other Biotas. In Oklahoma, Kansas, and other Middle Western States it stood the cold weather in fine shape, where Berckman's, Bonita, and other Biotas were either damaged or killed outright.

Italian Cypress Worthiana

This plant has proven to be hardier than any other strain of Italian Cypress. Besides the block shown, we have hundreds of smaller trees ranging from 2 to 4 feet.

CYPRESS, Italian Worthiana:

Very superior strain of symmetrical upright growth, and much hardier than other cypresses. The parent tree on our grounds is twenty years old and has never been injured by cold when all other specimens were either killed outright or severely damaged by the severe cold spells we have had every four or five years. Young plants propagated from this stock were uninjured in the field while other stock was killed. Every tree is handsome and uniform in its growth.

Juniper Pfitzeriana

As this picture indicates we have an unlimited supply of these plants—over 10,000 — all well-spaced and in perfect condition.

— Photo Oct. 1934

$A\,bellia$ Grandiflora

We have several thousand of these plants in the larger sizes. They are especially well adapted for landscape work, and have been trimmed so that they are compact and bushy.

Wax Loaf Ligustrum

All of our wax leaf ligustrums are grown from cuttings. They have a tendency to grow more spreading and heavier than those grown from grafts.

Fruit Trees and Roses

While we do not grow these items we are in position to supply them to our regular customers who buy a general line of stock for their retail trade.
